Ventilated Facades, an Innovative Rainscreen Building Approach

- **Program #: ECH-VF-1001**
- **Provider #: J-374**
- **CEU's 1 HSW**

A review of the ventilated facades rainscreen system, detailing the technical advantages for the architect in which potential energy efficiencies are seen, along with the reuse of existing buildings. The presentation will discuss the potential health benefits by gaining energy efficiencies in building and meeting required energy compliance standards. There is also discussion on mitigating moisture in ventilated facades buildings which will eliminate the potential for mold and water issues. Learn the characteristics and differences between glued and adhered ventilated facades. Learn the technical specifications and physical properties of ventilated facades. Learn the advantages of ventilated facades versus other rainscreen systems. Learn the best construction and planning methods for ventilated facades.
