

Brick Renovation of River Oaks Dealership

In 2009 the Napleton Automotive Group completed an addition between two existing masonry buildings. The project included the remodel of an existing Show Room and Administrative Offices.

The expansion added a two story Service Drive constructed of brick and block that was added onto an existing 2 wythe bearing wall. The signature Chrysler brick arch was utilized for the service drive with offices above on the 2nd floor.

A precast concrete plank floor system was used for structure and fire separation, and to separate the drive and offices.

At the rear of the building, brick faced masonry was used to blend with the existing brick faced walls. The remodel and expansion was designed to provide an improved customer experience, and to accommodate the for growth of their business.

- Group B Business & S-1
- Mixed Occupancy
- Type IIA Construction
