**TRENDSTONE – GROUNDFACE CMU**

COLOR: GRANITE GRAY & SANDSTONE

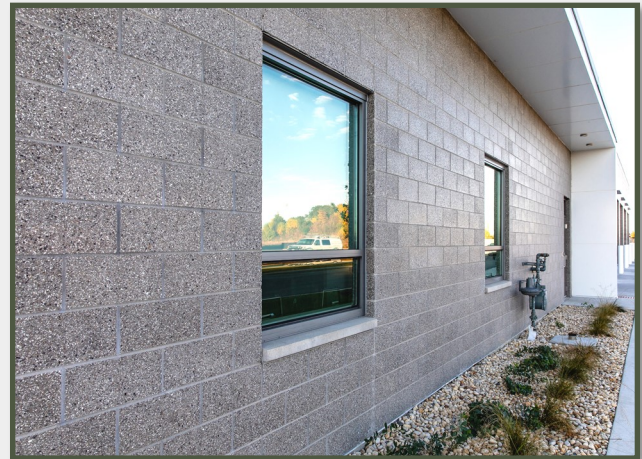

## Will County EMA

Joliet, Illinois

*Will county's new emergency management center beautifully displays a contemporary usage of masonry.*

**T**he Will County Emergency Management Agency (EMA) is responsible for coordinating the emergency and disaster mitigation, as well as preparedness, planning response and recovery efforts of the County in conjunction with the State of Illinois and other entities. The Will County EMA was previously operating out of two separate buildings that were not their own to house their vehicle fleet as well as a training program. The County needed a facility to protect their significant investment in emergency vehicles, as well as a training center for their staff and volunteers in their mission of continued enhancement of public safety.

*With the highest-performing insulated masonry on the market, InsulTech™, Will County EMA is built with both beauty and efficiency.*

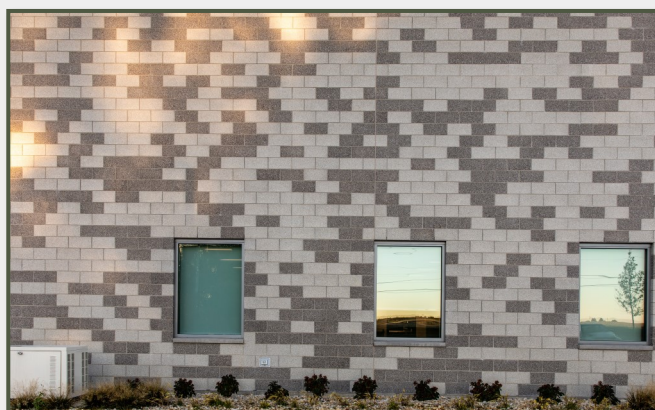

Wight & Company Architects worked with the County to consolidate their operations in an approximately 11,500 square foot new building dedicated to EMA. The building houses a Mobile Command Vehicle and other fleet vehicles used in emergency situations. The climate controlled, 7-bay vehicle storage area provides ample space for the fleet and accessory support such as battery charging and dispatch notification. With direct access to the vehicle storage area there is also training room, kitchenette, and support offices.

## Envisioned with InsulTech

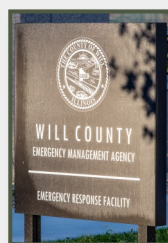

Built by Iwanski Masonry, Will County EMA provides its community with the assurances of safe living and working environments. A pillar of safety and reliability for a community deserves to be built with the most reliable materials possible. InsulTech™ features stainless steel “Fire Integrity Straps” that guard it from major fire and wind events alike.

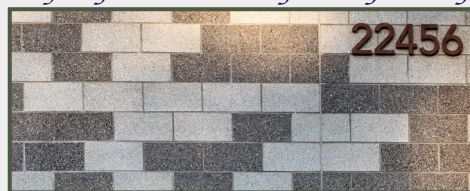

InsulTech™ offers ease of installation, as it is assembled in just a single pass, meeting all necessary components of masonry construction.

A comprehensive selection of architectural finishes and colors allows for beautiful finished projects. InsulTech is used in the construction of hotels, universities, and many other public and private facilities. InsulTech™ has proven time and again to be a versatile staple of construction that architects and masons alike can always rely on.

*Safety, Reliability, Simplicity.*
