Manufactured Stone Veneer Systems

1 LU/HSW

This course provides an exploration of Manufactured Stone Veneer Systems (MSVS), covering their aesthetic, environmental, and structural advantages over natural stone. Attendees will gain a comprehensive understanding of how MSVS can enhance building design while meeting modern code requirements. The course reviews substrate preparation techniques, evaluates current air and water resistive barrier classifications, and outlines how climate zones affect vapor barrier selection. This course is essential for architects and design professionals aiming to integrate sustainable, efficient, and code-compliant MSVS into both residential and commercial projects.
